Basic Info		
Licensing		Open-source (CERN-OHL-S-2.0)
Target FPGA or ASIC		FPGA/ASIC
Design Language		SystemVerilog
System-Level Features		
Coupling Type		
Data Types		
ISA		
Peak Ops Per Cycle		
Interfaces		AHB Lite
Supported Operations		
Compiler Support		
External Memory Required		
Cache Or Scratchpad		
Architecture		
Type		null
Num Clock Domains		1
Control Interface	ISAExtension Memory Mapped Protocol	
Memory Interface	Interface Protocol Hierarchy Level Cached IOMMU	
Interrupts		
Microarchitecture		
Parametrization	Parametric Num Units Parametric Config	RTL from a parametrized generator No
Programmability	Programmable Cores ISAExtension	
Software		
Compiler	Requires Specialized Compiler Supported Compilers	
Hardware Abstraction Layer	HAL Functions	
highLevelAPI	Has High Level API SDK Repository Has Domain Specific Compiler	
Integration		
IP Distribution	Manifest Type Standalone Simulation Standalone Simulation SW Requirements Integration Docs Or Examples IP-XACT System RDL	Bender.yml Formal Verification Formal Tools Yes
Synthesis	Is Synthesizable FPGA Synthesis Examples ASIC Synthesis Examples	Yes No No
Simulation	Closed Source Simulation Open Source Simulation	No No
Evaluation	PPA Results Available	No
Physical Implementation		
ASIC Area	Num Gates On Chip Internal Memory Size Target Clock Frequency
